Pittsburgh Market Update

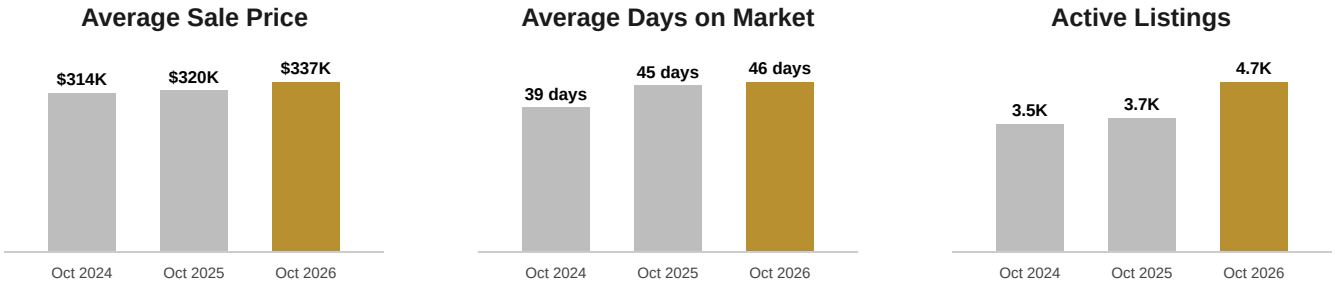
November 2026 | October's numbers for Allegheny County, and what easing rates mean

$337K	46 days	+27%	4.7 mo
Avg sale price +5.3% vs last Oct	Avg days on market up from 45	Active listings vs last Oct	Months of supply (6 = balanced)

The short version

Prices in Allegheny County are still higher than a year ago, but the ground is moving under them. Active listings reached 4,670 in October, up 27% from last October and the most of any month since at least 2022. Closed sales fell to 988, down from 1,134 a year ago, so homes are piling up faster than buyers are taking them. Months of supply jumped to 4.7, up from 3.2 last October. And for the first time in months, rates are moving the right way: the 30-year fixed fell from 7.40% in mid October to 7.18% on November 5. More homes to choose from, fewer buyers competing, and slightly cheaper money. That is a good setup for investors heading into winter.

What the numbers say



Prices. The average sale price was $314K in October 2024, $320K in October 2025, and $337K this October. That is +1.8% last year and +5.3% this year, about 7.2% over two years. The median rose faster, to $275K from $250K, a 10% jump, so the gains are showing up across the middle of the market and not only at the top. October is well off the June peak (about $382K average), the same seasonal slide we see every year as family buyers finish up and investors take over. Homes that did sell went for 99.0% of list price at the median, a touch better than 98.2% last October. Sellers who price right are still getting close to asking. The discounts are happening before the sale, in price cuts and listings that sit.

Days on market. Homes averaged 46 days on market in October, up from 41 in September, 45 last October, and 39 two years ago. This is the normal fall stretch starting. Last winter days on market peaked around 68 in February, and I expect a similar climb over the next few months.

Inventory. This is still the main story. Active listings rose to 4,670, up 7% from September, 27% from 3,683 last October, and 33% from 3,509 two years ago. New listings were about flat (1,524 vs. 1,539), so the build is not a wave of new sellers. It is slower sales. Closed sales were 988, down 13% from last October. (October sales may tick up a little as late closings get entered.) Months of supply is now 4.7, the highest reading since at least 2022. Six months is considered balanced, and we are getting close.

Most active neighborhoods

Here is where homes are actually selling. One month can be noisy, so the table shows October next to the last three months. Over three months, **Brookline** (38 sales) and **Squirrel Hill** (37) were the busiest neighborhoods in the city. **Lawrenceville** led October by itself with 16. The suburbs did far more volume: **Mt. Lebanon** had 88 sales, with **Ross Township** (75) and **McCandless** (74) close behind.

	OCTOBER		LAST 3 MONTHS		
NEIGHBORHOOD	SALES	MEDIAN	SALES	MEDIAN	SOLD VS LIST
CITY OF PITTSBURGH					
Brookline	10	$144K	**38**	$210K	96.8%
Squirrel Hill	10	$522K	**37**	$540K	97.6%
Lawrenceville	16	$355K	**29**	$500K	98.8%
Carrick	10	$150K	**29**	$140K	93.2%
Mt. Washington	13	$270K	**21**	$270K	93.7%
Greenfield	8	$276K	**17**	$275K	95.2%
Shadyside	8	$759K	**13**	$789K	97.1%
SUBURBS					
Mt. Lebanon	39	$413K	**88**	$450K	**100.3%**
Ross Township	34	$294K	**75**	$340K	**100.5%**
McCandless	30	$410K	**74**	$453K	**100.9%**

Closed residential sales. Sorted by sales over the last 3 months. Sold vs list is the sale price as a share of list price; gold means homes sold over asking.

City vs. suburbs. The clearest split is in what buyers paid. All three suburbs sold over asking, at 100.3% to 100.9% of list. Every city neighborhood sold under asking, from 98.8% in Lawrenceville down to about 93% in Mt. Washington and Carrick. In those two, buyers paid roughly $7 less for every $100 of list price. That is real room to negotiate.

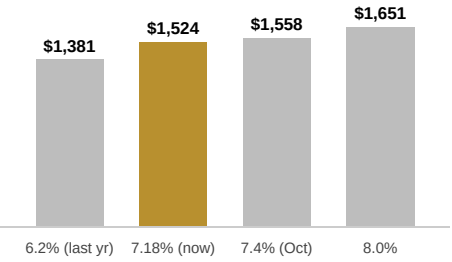
What stands out for investors. Carrick is the standout: a $140K median over three months, 29 sales, and the deepest discounts off list. Brookline is busier and a step up at a $210K median. Ross Township is the value play in the suburbs at a $340K median, about $110K below Mt. Lebanon and McCandless, but expect to pay full price there. Also note how much one month can swing. Lawrenceville's October median was $355K, while its three month median is $500K.

How interest rates affect this market

Where rates stand. The 30-year fixed averaged 7.18% in Freddie Mac's November 5 survey. That is the third straight weekly drop, down from 7.40% on October 8 and 15, then 7.32% and 7.24%. A year ago it was 6.22%. The 10-year Treasury, which mortgage rates actually track, has come back to about 4.90% after topping 5.25% in the fall selloff. The Fed held its rate at 3.75% to 4.00% on October 28, after the September hike. The next meeting is December 8 to 9, and another hike is still possible if inflation stays hot. The Mortgage Bankers Association expects

rates around 7.2% to 7.3% into next year. In plain terms: the relief is real but small. Do not plan on 6% rates coming back soon.

Monthly P&I on a $300K purchase, 25% down



What the rate move is worth. On a $300K purchase with 25% down ($225K loan), the drop from 7.40% to 7.18% saves about $34 a month. Compared to a year ago at 6.2%, you are still paying about $143 a month more, or roughly $1,700 a year. On a rental that is a line item, not the whole deal. Buying $10K to $15K under asking, or getting $3,000 in seller-paid closing costs, does more for your numbers than the last month of rate moves. With 4.7 months of supply, those concessions are easier to get than they have been in years.

Why Pittsburgh handles high rates better than most markets.

- **Lower price points, smaller dollar impact.** A half point on a $300K house is about $75 a month. On a $700K house in a coastal market it is roughly $175.
- **It is a cash flow market, not an appreciation bet.** Pittsburgh never ran up 40% in 2021, so it has little to give back. Investors here buy on rent versus payment.
- **Sellers are adjusting.** Listings are sitting longer and supply is near balanced. Sellers who need to move before the holidays are more open to price, credits, and rate buydowns.
- **Fewer competing buyers.** Sales are down 13% from last October. Fewer buyers on each house means fewer bidding wars and more normal negotiations.

What to do with this

- **Buy the deal, not the rate.** Investment loans usually price above the 7.18% headline rate, so underwrite at about 8%. If the numbers work there, any future drop is a bonus, not a rescue.
- **Look at the listings that are sitting.** Anything past 45 days on market is fair game for a lower offer, seller-paid closing costs, or a temporary rate buydown (a 2-1 buydown can cut year one payments by $200 or more a month).
- **November through February is the buying window.** Sales slow down, days on market climbs, and sellers who need to move before year end negotiate. Historically this is when my clients get the best terms.
- **Have a rate plan, not a rate prediction.** Lock when the payment works for you. If rates fall a full point, refinance. If they do not, you own a property that already works at today's number.

Bottom line. Prices are holding, homes are taking a little longer to sell, and there are more homes for sale than at any point in the past few years. Rates eased slightly in October, but the bigger opportunity is the supply. If you want to look at specific deals against these numbers, I run every property through the same rent versus payment check before it goes to a client.
